

The 60-Day Claude AI Challenge

Over the next 60 days you'll explore AI, ship practical projects, and build your work in public — developing the kind of consistency that helps professionals stand out. Here's everything you need to take part.

STARTS JUNE 1

60 DAYS · DAILY BUILDS

01

SET UP

Your GitHub Repository

Create one **dedicated repository** — it's the official record of your 60 days. Organise it day by day so progress is easy to follow:

```
Day1/   Day2/   Day3/   Day4/
Day5/   Day6/   Day7/   . . .
Day8/   →   Day60/
```

Each folder holds that day's work — **prompts, outputs, code, notes, and screenshots**. A clean, well-structured repo makes your progress easy to review.

02

SHARE

Build in Public on LinkedIn

Share your progress regularly. Each post should clearly cover:

- ☐ What you completed and what you built or explored
- ☐ Your key learnings, insights, and any real-world applications
- ☐ Screenshots or a short demo of the result

Tag us in every post so we can track participation and amplify your work:
